

Jig and minnow

Rig sheet — original assembly diagram

ChatGPT edition

Job. Combines depth control with live-bait movement.

Components and build

Tie directly with a sound knot. Choose the lightest head that reaches bottom and remains detectable. Hook bait to preserve movement; obey bait law.

Fish it

Lower or cast, find bottom, lift briefly and follow the fall on a controlled line. Strike when weight, rhythm or direction changes.

Pine Lake	Work hard breaks and the island saddle.
North Lake	Work channel lips and eastern breaks.
Adjustment	Change head weight before changing the entire presentation.

CONTROL THE HOOKS, FISH AND LAW

Control the exposed hook and never transport live fish away from the water. Use tackle strong enough to retrieve the target promptly. Prepare pliers and a knotless rubber net before the cast. If a hook is deep, cutting the line can be less damaging than prolonged extraction. Verify exact-water 2026–27 rules, hook count, bait law and seasons before every trip.
