Rig sheet — original assembly diagram

Job. Lets both ends of a straight worm pulse on a slow fall.

Components and build

Tie a small hook and place it through an O-ring at the worm midpoint, or through the plastic when necessary. Start weightless.

Fish it

Cast past the target, allow a slack-controlled fall, lift once or twice, and repeat. Most takes occur on the fall.

Pine Lake Use over clear shelf edges with long casts.

North Lake Use around shallow breaks and sparse cover.

Adjustment Add minimal weight only when depth or wind prevents control.

CONTROL THE HOOKS, FISH AND LAW

Use line and tackle capable of steering bass away from cover promptly. Use tackle strong enough to retrieve the target promptly. Prepare pliers and a knotless rubber net before the cast. If a hook is deep, cutting the line can be less damaging than prolonged extraction. Verify exact-water 2026–27 rules, hook count, bait law and seasons before every trip.
